

Biodynamic EVOO Available!

Last year, we searched Australia for an organic extra virgin olive oil of high enough quality to be included in our portfolio.

This year, we are very pleased that one of our existing producers is making not just an **organic** but a **biodynamic** extra virgin olive oil of excellent quality.

Biodynamic agriculture is a form of organic agriculture. As in organic agriculture, artificial fertilizers and toxic pesticides and herbicides are not used and they both aim to build and sustain soil productivity as well as plant health. The biodynamic philosophical beliefs are that the energetic forces and the astrological influences affect the plants thus work in the grove and harvesting follows the moon's cycles.

The **Mount Zero Biodynamic Extra Virgin Olive Oil** is made from a single grove planted in the 1950's. The oil has wonderful liquorice and freshly cut grass aromas. It is a delicate oil with light bitterness and a late light pepper. The grassy characters follow through on the palate joined by hints of vanilla.

The oil is available now. Do not hesitate to contact us for further information or a sample.

Best regards

Melissa and Jenny

Ps Mount Zero produces other organic and biodynamic products. Do ask us about them!
